## Milwaukee Introduces New 18-volt Compact Drill

MILWAUKEE, WI – Expanding its award-winning line of lithium-ion powered cordless tools and accessories, Milwaukee Electric Tool Corporation introduces a new 18-volt Compact Drill/Driver that is lightweight and powerful enough to handle a variety of applications, including electrical work, light assembly, installation and finish carpentry.

With a 1.4 Ah, 18-volt lithium-ion battery, the 2601-22 delivers the speed (0-1,400 RPM) and power (400-in/lbs. of torque) needed for drilling holes and driving screws faster. Milwaukee's patented power management system and exclusive lithium-ion manganese battery chemistry provide fade-free power until the end of charge. At only four pounds, this tool provides a compact, lightweight solution without sacrificing features or durability.

A two-speed magnesium gearbox, 22-position clutch setting, and a ratcheting chuck provide the versatility and control that professionals demand. Additionally, the 2601-22 offers a soft-grip trigger for increased comfort and control, a built-in LED light for added visibility and a built-in battery fuel gauge to display remaining run-time and eliminate guesswork.

"As the leaders in lithium-ion technology for cordless tools, Milwaukee is able to offer the heavy-duty power and features that professional users expect in our most compact and lightweight 18-volt package to date," says Rick Gray, Director of Cordless Tools. "After putting the 2601-22 to the test, we're confident our customers will agree that the run-time, durability and overall performance is unmatched."

The 2601-22 includes two batteries, a 30-minute charger, belt hook, screwdriver bits and a heavy-duty case. The product is also backed by Milwaukee's five-year tool warranty and two-year battery warranty.

#### Key Features

- Lithium-ion battery delivers longer life and run-time with fade-free power
- Ergonomic, compact, and lightweight design for operator comfort
- Built-in battery fuel gauge displays remaining run-time
- 22-position clutch setting
- Yukiwa single sleeve ratcheting chuck ensure secure bit grip
- Built in LED light for added visibility
- On-board bit storage

#### Specs

- RPM: 0-350, 0-1,400
- Torque: 400-in/lbs.
- 1.4 Ah lithium-ion battery
- Capacity: 1/16" – 1/2"
- Total Weight: 4.0 pounds
- Total Length: 7-3/4"
- Charge Time: 30 minutes
